## **BEST ENGINEERING SOCIETY OF THE YEAR 2020**

### **Winner**

Handprints e-NABLE Scotland, University of Scotland

### **Overview of entry**

Handprints e-NABLE Scotland is a student-led, non-profit organisation that 3-D prints fully functioning upper limb prosthetics for children and adults internationally. All costs are covered by the societies ever-continuing fundraising efforts with an incentive to ensure equality in the provision of prosthetics. The quality of these personalised prosthetics and hence, the continued efforts to improve them, are two of the fundamental reasons as to why this society is so ground-breaking. To add to this, the society has a hugely successful education division, visiting schools, parents' evenings, and networking events to enlighten the younger generation on the e-NABLE chapter, prosthetics and to hopefully start them off on a journey in STEM. Whether it's the innovation of their myoelectric division, creating an affordable solution to the electrically powered prosthesis, or the outreach division, producing bespoke pieces for humans and animals alike, Handprints e-NABLE Scotland put their all into everything they've achieved.
